FOREWORD

This standard establishes requirements necessary for ensuring the compliance of National Airspace Systems (NAS) open systems to Open Systems Interconnection (OSI) requirements specified in FAA-STD-039a (or latest revision). Open system interfaces employed within the NAS must be certified implementations of communication protocols that comply with the International Organization for Standardization (ISO) OSI standards, as well as the Government Open Systems Interconnection Profile (GOSIP), PIPS PUB 146-1.

This standard includes definitions in section 6.1 and is written in accordance with FAA-STD-005.

TABLE OF CONTENTS

TABLE OF CONTENTS

1. SCOPE

1.1 Scope. This standard provides the requirements for ensuring that vendor-supplied Open Systems Interconnection (OSI) products conform to the NAS OSI requirements specified in FAA-STD-039a (or latest revision).

Conformance testing requirements for NAS open systems which communicate via the Aeronautical Telecommunication Network (ATN) are contained in the ATN manual.

1.2 Purpose. The purpose of this standard is to establish conformance testing requirements and to ensure OSI compliance for NAS open systems. Conformance testing does not guarantee interoperability, but is designed to increase the probability that different vendor implementations of OSI products are interoperable. Successful communications among NAS open systems is more likely if all systems conform to the same standards.

1 3 Relationship to Other Documents. This document provides requirements for testing the conformance of the protocols specified in FAA-STD-039a (or latest revision).

(THIS PAGE INTENTIONALLY LEFT BLANK)

3. REQUIREMENTS

3.1 General Requirements. NAS open systems shall conform to International Organization for Standardization (ISO) standards, as well as FIPS PUB 146-1, Government Open Systems Interconnection Profile (GOSIP) as specified in FAA-STD-039.

Conformance testing of vendor-developed Open Systems Interconnection (OSI) products shall be accomplished by the methodology specified in ISO/IEC 9646, (Parts 1 to 7). Conformance testing shall be performed by accredited testing agencies in accordance with the policies specified in the GOSIP Conformance and Interoperation Testing and Registration document, NISTIR 4594. The means of testing (MOT) used to determine the compliance of the system under test (SUT), shall be accredited by the National Institute of Standards and Technology (NIST) Computer Systems Laboratory (NCSL) or its agent. The MOT shall be based on an abstract test suite (ATS) approved by NCSL (i.e., GOSIP ATS). If such an ATS is not available, then an approved ISO ATS shall be used. If neither a GOSIP or ISO ATS exist, then the vendor-provided MOT shall be approved by the FAA.

Conformance testing of vendor-provided commercial-off-the-shelf (COTS) OSI products shall be verified through GOSIP registration.

3.2 Protocol Specific Requirements. This section contains specific requirements for ensuring the compliance of vendor-provided OSI protocols to NAS OSI requirements.

3.2 1 Upper Layers.

3.2.1.1 Application Layer. NAS open-end systems use common application service elements (ASE) to provide application layers services common to user applications. These ASEs include association control service element (ACSE) and remote operations service element (ROSE). NAS open-end systems may select from several specific ASEs to satisfy particular open-end systems requirements. These ASEs include file transfer,

access and management (FTAM), message handling system (MHS), transaction processing, (TP), and virtual terminal (VI).

3.2.1.1.1 Association Control Service Element (ACSE). NAS open-end systems implement the ACSE protocol as specified in ISO 8650. The MOT used for testing the conformance of ACSE shall be based on the generic ATS for ACSE as specified by WD 10169-2, Common ACSE Abstract Test Suite. Implementors claiming ACSE conformance shall complete DIS 8650-2, Annex A, Protocol implementation Conformance Statement (PICS) Proforma.

3.2.1.1.2 Remote Operations Service Element (R05E). NAS open-end systems implement the ROSE protocol as specified in ISO 9072-2. Currently, neither a registered generic abstract test suite or PICS Proforma exists for ROSE. Therefore, the vendor-provided MOT and PICS Proforma for ROSE shall be approved by the FAA.

3.2.1.1.3 File Transfer Access and Management (FTAM). NAS open-end systems implement the FTAM protocol as specified in ISO 8571-4. The MOT used for testing the conformance of FTAM shall be based on GOSIP FTAM abstract test suite, ATS 2- 16. Implementors claiming FTAM conformance shall complete ISO 8571-5, PICS Proforma.

3 2.1.1.4 Message Handling System (MHS). NAS open-end systems implement the MHS protocol as specified in ISO 10021-6. Currently, neither a registered abstract test suite or PICS Proforma exists for MHS (1988). Therefore, the vendor-provided MOT and PICS Proforma for MHS (1988) shall be approved by the FAA.

3.2.1.1.5 Transaction Processing (TP). NAS open-end systems implement the TP protocol as specified in DIS 10026-3.2. Currently, a registered abstract test suite for testing TP does not exist. Therefore, the vendor-provided MOT for testing TP shall be approved by the FAA. Implementors claiming TP conformance shall complete CD 10026-4.2, PICS Proforma.

3.2.1.1.6 Virtual Terminal (V r). NAS open end systems implement the VT protocol as specified in ISO 9041-1. Currently, a registered abstract test suite for testing VT does not exist Therefore, the vendor-provided MOT for testing VT shall be approved by the FAA. Implementors claiming VT conformance shall complete DIS 9041-2, PICS Proforma.

3.2.1.2 Presentation Layer. NAS open-end systems implement the Connection-Oriented Presentation protocol as specified in ISO 8823. Currently, a registered generic abstract test suite for testing the presentation protocol does not exist. Therefore, the vendor-provided MOT for testing the presentation protocol shall be approved by re FAA implementors claiming presentation protocol conformance shall complete DIS 8823-2, PICS Proforma.

3.2.1.3 Session Layer. NAS open end systems implement the connection-oriented session protocol specification as specified in ISO 8327 and ISO 8327/DAD2. The MOT used for testing the conformance of the session protocol shall be based on the generic GOSIP

session abstract test suite, ATS 2- 10. Implementors claiming session protocol conformance shall complete CD 8327-2.2, PICS Proforma.

3.2.2 Lower Layers.

3.2.2.1 Transport Layer. NAS open-end systems implement the connection-oriented transport protocol as specified in ISO 8073 and ISO 8073/AD2. The MOT used for testing the conformance of the transport class 0 protocol shall be based on GOSIP transport abstract test suite, ATS 2-8. The MOT used for testing the conformance of the transport class 4 protocol shall be based on GOSIP transport abstract test suite, ATS 2-9. Implementors claiming transport protocol conformance shall complete GOSIP Version 2 PICS Proforma for Transport Class 0 and 4 Protocols (ISO 8073).

3.2.2.2 Network Layer.

3.2.2.2.1 Network Layer Protocol.

3.2.2.2.1.1 Connectionless Network Protocol. NAS open-end systems implement the protocols for connectionless-mode network protocol (CLNP) as specified in ISO 8473 and ISO 8473/AD3. The MOT used for testing the conformance of CLNP shall be based on GOSIP CLNP abstract test suite, ATS 2-7. Implementors claiming connectionless network protocol conformance shall complete GOSIP version 2 PICS Proforma for connectionless network layer protocol (ISO 8473).

3.2.2.2.1.1.1 End System to Intermediate System Routing Protocol. NAS open systems (e.g., end systems and routers) use the end system to intermediate system (ES-IS) protocol as specified in ISO 9542. Currently, a registered abstract test suite for testing ES-IS does not exist. Therefore, the vendor-provided MOT for testing ES-IS shall be approved by the FAA. Implementors claiming ES-IS protocol conformance shall complete ISO 9542, Annex A, PICS Proforma.

3.2.2.2 1.1.2 Intermediate System to Intermediate System Intra Domain Routing Protocol. NAS open intermediate systems (e.g., routers), which provide routing within the NAS, use the intermediate system to intermediate system (IS-IS) protocol as specified in ISO 10589. Currently, a registered abstract test suite for testing IS-IS does not exist. Therefore, the vendor-provided MOT for testing IS-IS shall be approved by the FAA. Implementors claiming IS-IS protocol conformance shall complete ISO 10589, Annex A, PICS Proforma.

3.2.2.2.1.1.3 Boundary Intermediate System to Boundary Intermediate System Inter-Domain Routing Protocol. NAS open intermediate systems (e.g., routers), use the boundary intermediate system to boundary intermediate system (BIS-BIS) protocol as specified in DIS 10747. Currently, a registered abstract test suite for testing BIS-BIS does not exist. Therefore, the vendor-provided MOT for testing BIS-BIS shall be approved by the FAA. Implementors claiming BIS-BIS protocol conformance shall complete DIS 10747, Annex A, PICS Proforma.

3.2.2.2.1.2 connection-oriented Network Protocol. NAS open end systems which require a network connection when communicating over intermediary networks and not directly connected to a X.25 packet switching network, implement the connection-oriented network service (CONS) in conjunction with ISO 8473, as specified in ISO 8880-2. Currently, neither a registered ATS nor PICS Proforma exists for ISO 8880-2. Therefore, the vendor-provided MOT and PICS Proforma for ISO 8880-2 shall be approved by the FAA.

NAS open end systems communicating only over a single X.25 network (i.e., no intermediary networks) implement CONS in conjunction with ISO 8208, as specified in ISO 8878. Currently, a registered abstract test suite does not exist for testing ISO 8878. Therefore, the vendor-provided MOT for testing ISO 8878 shall be approved by the FAA. Implementors claiming conformance shall complete DIS 8878-2, PICS Proforma.

3.2.2.2.2 Subnetwork Access Protocol. NAS open end systems communicating over wide area networks (WAN) implement the subnetwork access protocol for data terminal equipment (DTE) interfaces as specified in FAA-STD-039a and defined in ISO 8208.

Intermediate systems (e.g., routers) providing DTE internetwork access for open-end systems implement the subnetwork access protocol as defined in ISO 8208. The MOT for testing ISO 8208 shall be based on GOSIP abstract test suite, ATS 2-2. Implementors claiming conformance shall complete GOSIP Version 2 PICS Proforma for Packet Layer (ISO 8208).

Intermediate systems (i.e., packet switching nodes) providing WAN subnetwork access to open end systems implement the subnetwork access protocol for data Circuit Terminating equipment (DCE) defined in CCITT X.25 (1984). Currently, neither a registered abstract test suite nor a PICS Proforma exists for CCITT X.25 (1984) for DCE interfaces. Therefore, the vendor-provided MOT and PICS Proforma for DCE CCITT X.25 (1984) interfaces shall be approved by the FAA.

3.2.2.3 Data Link Layer.

3.2.2.3.1 ISO 4335. NAS open systems implement high level data link control (HDLC) protocol as specified in ISO 4335. Currently, neither a registered abstract test suite nor a PICS Proforma exists for ISO 4335. Therefore, the vendor-provided MOT and PICS Proforma shall be approved by the FAA.

3.2.2.3.2 CCITT X.25 LAPB. NAS open systems which provide subnetwork access implement DCE Link Access Procedure for Balance (LAPB) system as specified in CCITT X.25 (1984). Currently, neither a registered abstract test suite nor PICS Proforma exists for CCITT X.25 LAPB. Therefore, the vendor-provided MOT and PICS Proforma for testing CCITT X.25 LAPB shall be approved by the FAA.

3.2.2.3.3 ISO 7776. NAS open systems provide a compatible LAPB interface as specified in ISO 7776. The MOT used for testing the conformance to ISO 7776 protocol shall be

based on GOSIP abstract test suite, ATS 2 1. Implementors claiming protocol conformance shall complete ISO 7776/AM1, PICS Performa.

3.2.2.3.4 ISO 7478 (Multilink Procedure). NAS open end systems implement the Multi-link procedure (MLP) as specified in ISO 7478. Currently, neither a registered abstract test suite nor a PICS Proforma exists for ISO 7478. Therefore, the vendor-provided MOT and PICS Proforma for ISO 7478 shall be approved by the FAA.

Intermediate systems which provide subnetwork access implement Multi-link procedures as specified in CClTT X.25 (1984). Currently, neither a registered abstract test suite nor a PICS Proforma exists for CCITT X.25 (1984) Multi-link Procedure. Therefore, the vendor-provided MOT and PICS Proforma for CCITT X.25 (1984) Multi-link Procedure shall be approved by the FAA.

3.2.2.3.5 CCITT X.32. NAS open systems implement dial in/dial out services and procedures as specified in CCITT X.32. Currently, neither a registered abstract test suite nor a PICS Proforma exists for CCITT X.32. Therefore, the vendor-provided MOT and PICS Proforma for CCITT X.32 shall be approved by the FAA.

3.2.2.3.6 ISO 8802 2. NAS open systems implement logical link control (LLC) as specified in ISO 8802-2. The MOT used for testing the conformance to ISO 8802-2 protocol shall be based on GOSIP abstract test suite, ATS 2-6. Implementors claiming LLC protocol conformance shall complete ISO 8802-2/PDAM3.3, PICS Proforma.

3.2.2.4 Physical Layer. NAS open systems implement EIA-530, EIA-232D, EIA-232E, RS-232C, V.35, V.32, ISO 8802-3, ISO 8802-4, and ISO 8802-5, and ISO 9314-1 (FDDI) as specified in FAA-STD-039a.

EIA-530, EIA-232D, EIA-232E, RS-232C, V.35, and V.32 functions and options shall be tested with standard data communication test equipment.

3.2.2.4.1 ISO 8802-3. NAS open end systems use a collision detection access protocol as specified in ISO 8802-3. The MOT used for testing the conformance to ISO 8802-3 protocol shall be based on GOSIP abstract test suite, ATS 2-3. Currently, a PICS Proforma does not exist for this protocol. Therefore, the vendor-provided protocol for ISO 8802-3 shall be approved by the FAA.

3.2.2.4.2 ISO 8802-4. NAS open-end systems use a token passing protocol suitable for broadband bus architectures as specified in ISO 8802-4. The MOT used for testing the conformance to ISO 8802-4 protocol shall be based on GOSIP abstract test suite, ATS 2-4. Currently, a PICS Proforma does not exist for this protocol. Therefore, the vendor-provided protocol for ISO 8802-4 shall be approved by the FAA.

3.2.2.4.3 ISO 8802-5. NAS open-end systems use a token passing protocol suitable for ring architectures as specified in ISO 8802-5. Currently, a registered abstract test suite for testing the conformance of ISO 8802-5 protocol does not exist. Therefore, the vendor-

provided MOT for testing ISO 8802-5 protocol shall be approved by the FAA. Implementors claiming protocol conformance shall complete ISO 8802-5, PICS Proforma.

3.2.2.4.4 ISO 9314-1 (FDDI). NAS open-end systems will use a connectionless token passing protocol as specified in ISO 9314-1. Currently, a registered abstract test suite for testing the conformance of ISO 9314-1 protocol does not exist. Therefore, the vendor-provided MOT for testing ISO 9314-1 protocol shall be approved by the FAA. Implementors claiming protocol conformance shall complete WD 9314-13, PICS Proforma.

6. NOTES

6.1 Definitions.

Abstract Test Case - A complete and independent specification of the actions required to achieve a specific test purpose (or a specified combination of test purposes), defined at the level of abstraction of a particular abstract test method, starting in a stable testing state and ending in a stable testing state. This specification may involve one or more consecutive or concurrent connections.

Abstract Test Method - The description of how an IUT is to be tested, given at an appropriate level of abstraction to make the description independent of any particular realization of a means of testing, but with enough detail to enable tests to be specified for this method.

Abstract Test Suite - The complete set of abstract test cases needed to perform dynamic conformance testing for a given OSI protocol.

Conformance - Fulfillment by a product of all specified requirements.

Conformance Testing - Testing the extent to which an IUT is a conforming implementation.

End System - An end system contains the application processes that are the ultimate sources and destinations of user-oriented message flows. The functions of an end system can be distributed among more than one processor/computer.

Executable Test Case - A realization of an abstract test case.

Executable Test Suite - A suite composed of executable test cases.

GOSIP Product - A product which implements one or more of the data communications protocols identified in GOSIP and meets the requirements specified herein.

Implementation Under Test (IUT) - An implementation of one or more OSI protocols in an adjacent user/provider relationship, being that part of a real open system which is to be stuthed by testing.

Intermediate System - A system providing an Open Systems Interconnection - Reference Model Network Layer relay function (that is, a system that receives data from one correspondent Network entity and forwards it to another corresponding Network entity).

Means of Testing - The realization of an abstract test method as defined in the OSI conformance testing methodology and framework. This realization includes the test system, executable test suite, testing support tools (hardware and software) and documentation (including technical test procedures).

Open System - An open system is a system capable of communicating with other open systems by virtue of implementing OSI protocols and services. End systems and intermediate systems are open systems. However, an open system may not be accessible by all other open systems. This isolation may be provided by physical separation or by technical capabilities based upon computer and communications security.

Protocol implementation Conformance Statement (PICS) - A statement made by the supplier of an OSI implementation, or system, stating which capabilities and options have been implemented for a given OSI protocol.

Protocol Implementation Conformance Statement (PICS) Proforma - A document, in the form of a questionnaire, designed by the protocol specified or conformance test suite specified which when completed for an OSI implementation or system, becomes the PICS.

System Under Test (SUT) - The real open system in which the IUT resides.
